

BAB V

KESIMPULAN DAN SARAN

A. Kesimpulan

Hasil penelitian dan analisa data-data statistik terhadap uji sifat fisik tablet antalgin dapat disimpulkan:

1. Madu dapat digunakan sebagai bahan pengikat dalam pembuatan tablet antalgin.
2. Ada perbedaan yang signifikan antara ketiga formula tablet antalgin yang dibuat dengan pengikat madu pada konsentrasi 3%, 4% dan 5% yang meliputi kekerasan tablet, kerapuhan tablet, dan waktu hancur tablet. Sedangkan keseragaman bobot menunjukkan tidak ada perbedaan yang signifikan.

B. Saran

1. Perlu dilakukan penelitian dengan menggunakan bahan pengikat lain dengan konsentrasi yang berbeda terhadap bahan aktif antalgin.
2. Perlu dilakukan penelitian lebih lanjut tentang pembuatan tablet antalgin dengan metode lain.

One-Sample Kolmogorov-Smirnov Test

		waktuhancur
N		45
Normal Parameters ^{a,b}	Mean	813.44
	Std. Deviation	50.970
Most Extreme Differences	Absolute	.075
	Positive	.075
	Negative	-.074
Kolmogorov-Smirnov Z		.504
Asymp. Sig. (2-tailed)		.961

a. Test distribution is Normal.

b. Calculated from data.
