

BAB V

KESIMPULAN DAN SARAN

A. Kesimpulan

1. Dari hasil penelitian didapatkan bahwa ekstrak biji adas (*Foeniculum vulgare*) dapat berperan sebagai imunostimulan, dilihat dari rerata kenaikan jumlah monosit (%) dan makrofag mencit jika dibandingkan dengan kelompok kontrol.
2. Dari ketiga dosis yang diberikan semuanya dapat meningkatkan rerata jumlah monosit (%) dan makrofag. Hasil terbaik didapatkan pada dosis 250 mg/kg BB.

B. Saran

1. Perlu dilakukan penelitian lebih lanjut untuk memgetahui potensi biji adas sebagai imunostimulan alami dengan menggunakan dosis yang berbeda.
2. Perlu dilakukan penelitian lebih lanjut dengan menggunakan metode dan parameter yang lebih spesifik untuk membuktikan kemampuan biji adas sebagai imunostimulan.

 631a _____ 148. Apiaceae
 1a-2a-3b-4b-6b-7a-8a-9a _____ 17. *Foeniculum*
 1 _____ *Foeniculum vulgare* Mill.

Deskripsi Tumbuhan :

Habitus : perdu, tahunan, tinggi 0.5-3 m, tumbuh tegak, sangat aromatik. Akar : tunggang, putih kotor atau putih kekuningan, bercabang. Batang : lunak atau sedikit berkayu, berlubang, permukaan batang beralur, percabangan simpodial, jumlah cabang banyak, permukaan gundul, hijau keputih-putihan. Daun : majemuk, menyirip ganda, berbentuk bulat telur, panjang 30-50 cm, lebar 15-25 cm, tepinya berbagi menyirip; anak daun berbentuk jarum, ujung dan pangkal runcing, tepi rata, permukaan gundul, hijau muda hingga tua; panjang pelepas 5-7 cm, hijau tua hingga muda. Bunga : majemuk berbentuk payung, di ujung batang, dalam satu payung besar terdapat 6 - 40 bunga payung kecil, dengan panjang tangkai payung 1 - 6 cm, masing-masing bunga payung kecil bertangkai pendek; kelopak bentuk tabung, daun kelopak 5, hijau; mahkota bunga berwarna kuning terang, daun mahkota 5, panjang 3.5 - 4 mm; tangkai putik pendek, permukaan bakal buah gundul; daun pembalut (involukrum) tidak ada. Buah : kering, lonjong atau bulat memanjang, panjang 4-9 mm, diameter 2-4.5 mm, permukaan beralur, tidak bersayap, masih muda hijau setelah tua hijau keabu-abuan. Biji : kecil, kering, coklat kehitaman, aromatik.

Lampiran 6. Perlakuan dan Hewan Uji

Lampiran 7. Hasil Uji Statistik Rerata Jumlah Monosit

Uji Normalitas

One-Sample Kolmogorov-Smirnov Test

		hari pengambilan	kelompok dosis	kadar monosit
N		27	27	27
Normal	Mean	2.00	2.00	2.815
Parameters ^{a,b}	Std. Deviation	.832	.832	1.8515
Most Extreme Absolute		.219	.219	.260
Differences	Positive	.219	.219	.260
	Negative	-.219	-.219	-.142
Kolmogorov-Smirnov Z		1.136	1.136	1.349
Asymp. Sig. (2-tailed)		.151	.151	.052

a. Test distribution is Normal.

b. Calculated from data.

Uji ANOVA

Levene's Test of Equality of Error Variances^a

Dependent Variable:kadar monosit

F	df1	df2	Sig.
7.333	8	18	.000

Tests the null hypothesis that the error variance of the dependent

variable is equal across groups.

a. Design: Intercept + hari + kelompok + hari * kelompok

Tests of Between-Subjects Effects

Dependent Variable:kadar monosit

Source	Type III Sum of Squares	df	Mean Square	F	Sig.
Corrected Model	61.981 ^a	8	7.748	5.136	.002
Intercept	213.926	1	213.926	141.812	.000
hari	13.410	2	6.705	4.445	.027
