

BAB V

KESIMPULAN DAN SARAN

A. Kesimpulan

Pertama, Proporsi formula optimum Stearin dan Kolliphor EL dalam pembuatan basis *solid* SNEDDS Naringenin yaitu 1 bagian stearin dan 4 bagian Kolliphor-EL dengan parameter *emulsification time* sebesar 17,67 detik, persen transmittan 40,27%, persen disolusi 100,148% pada menit ke-10, AUC disolusi 683,94 hingga menit ke-10, dan konstanta difusi 0,1548

Kedua, Komponen Stearin memberikan pengaruh yang lebih besar pada parameter *emulsification time* (54,08%) dan uji difusi (87,90%), sedangkan Kolliphor-EL memberikan pengaruh lebih besar terhadap parameter persen transmittan (48,39%) dan uji disolusi (59,66%) *solid* SNEDDS Naringenin.

B. Saran

Pertama, perlu dilakukan penelitian lebih lanjut dalam pembuatan *solid* SNEDDS Naringenin dengan perbandingan bahan dan karakterisasi serta uji fisik yang lebih mendetail.

Kedua, perlu dilakukan penelitian lebih lanjut mengenai Optimasi *solid* SNEDDS Naringenin dalam pembuatan ke dalam bentuk sediaan obat.

Lampiran 1. Komponen Penyusun Solid SNEDDS Naringenin

| GAMBAR BAHAN | NAMA BAHAN |
|---|----------------------|
|  | ZAT AKTIF NARINGENIN |
|  | STEARIN (MINYAK) |
|  | PEG 1000 |
|  | KOLLIPHOR EL |

Lampiran 2. Alat-alat yang digunakan dalam praktikum

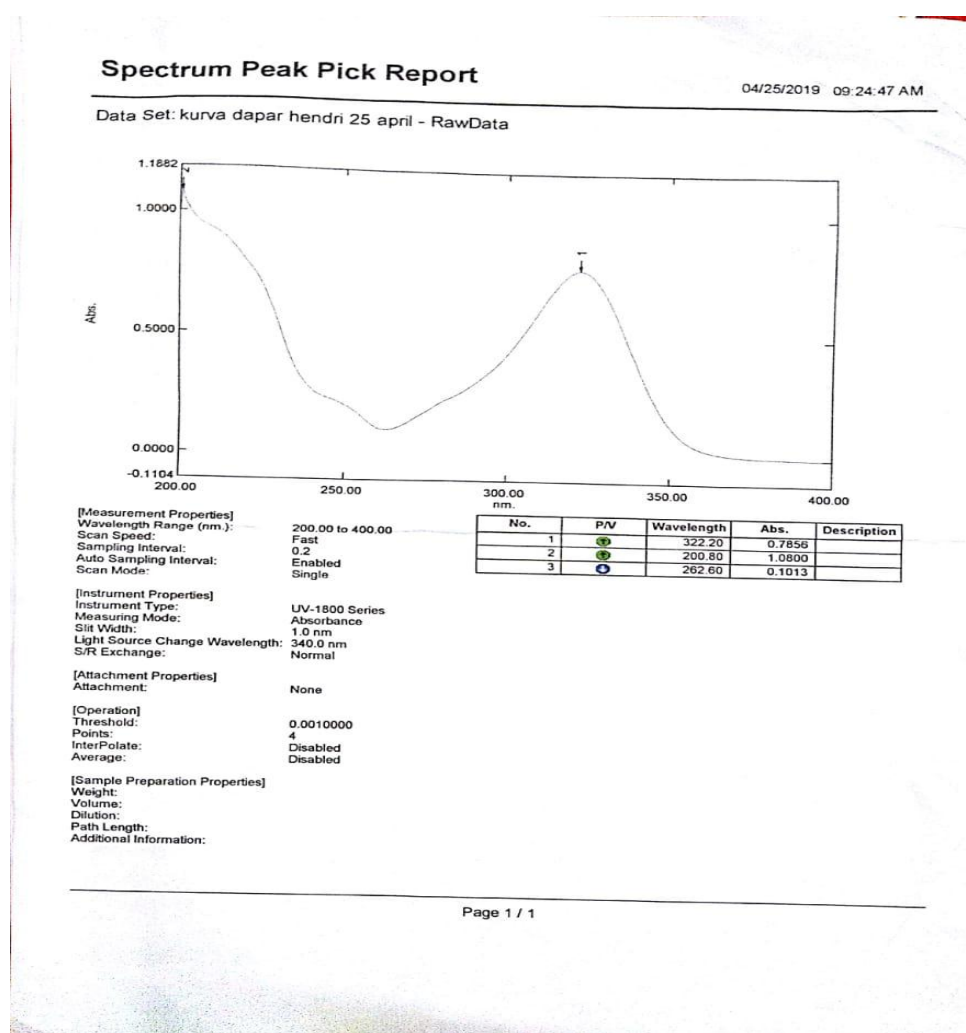

| No | Alat | Nama Alat | Kegunaan |
|----|---|--------------------------------|--|
| 1 |  | Neraca analitik | Menimbang bahan, baik bahan baku maupun <i>eksipien</i> . |
| 2 |  | Mikropipet | Mengukur dan mengambil bahan, baik bahan baku maupun <i>eksipien</i> berupa cairan |
| 3. |  | <i>Spektrofotometer UV-Vis</i> | Membaca serapan bahan aktif dan pembacaan <i>transmitan</i> |

| No | Alat | Nama Alat | Kegunaan |
|----|---|------------------|---------------------------------------|
| 4. |  | <i>Stopwatch</i> | Untuk alat mesin hitung waktu |
| 5. |  | Sentrifugasi | <i>Centrifuge</i> sample |
| 6 |  | Magnetic stirrer | Mencampur dan menghomogenkan komponen |

Lampiran 3. Pembuatan kurva kalibrasi dan validasi metode analisis

a. Penentuan panjang gelombang maksimum Naringenin

Panjang gelombang maksimum diperoleh dari *scanning* larutan Naringenin konsentrasi 10 µg/mL dengan pelarut dapar fosfat pH 7,4. Hasil yang diperoleh yaitu panjang gelombang maksimum sebesar 322 nm dengan serapan 0,7856 µg/mL.

b. Kurva Kalibrasi

| Konsentrasi ($\mu\text{g/mL}$) | Pembacaan 1 | Pembacaan 2 | Pembacaan 3 | Pembacaan 4 | Rata- rata |
|-------------------------------------|----------------|----------------|----------------|----------------|---------------|

d. Disolusi (Q₁₀)

The "Pred R-Squared" of 0.1142 is not as close to the "Adj R-Squared" of 0.4587 as one might normally expect. This may indicate a large block effect or a possible problem with your model and/or data. Things to consider are model reduction, response transformation, outliers, etc.

"Adeq Precision" measures the signal to noise ratio. A ratio of 3.62 indicates an inadequate signal and we should not use this model to navigate the design space.

| Factor | Coefficient Estimate | Standard Error | 95% CI Low | 95% CI High | VIF |
|----------------|----------------------|----------------|------------|-------------|------|
| Intercept | 97.02 | 0.88 | 95.00 | 99.05 | |

e. Difusi (Konstanta difusi)

The "Pred R-Squared" of 0.9628 is in reasonable agreement with the "Adj R-Squared" of 0.9773.

"Adeq Precision" measures the signal to noise ratio. A ratio greater than 4 is desirable. Your ratio of 26.930 indicates an adequate signal. This model can be used to navigate the design space.

| Factor | Coefficient | | df | Standard Error | 95% CI | | VIF |
