

BAB VI

RINGKASAN

Manajemen obat di Rumah sakit merupakan salah satu unsur penting dalam fungsi manajerial Rumah sakit secara keseluruhan, karena ketidakefisienan akan memberikan dampak negatif terhadap Rumah sakit secara medis maupun secara ekonomi. Tujuan manajemen obat di Rumah sakit adalah agar obat yang diperlukan tersedia setiap saat dibutuhkan, dalam jumlah yang cukup, mutu yang terjamin dan harga yang terjangkau untuk mendukung pelayanan yang bermutu. Dalam sistem manajemen obat, masing-masing fungsi utama terbangun berdasarkan fungsi sebelumnya dan menentukan fungsi selanjutnya.

Rumah sakit merupakan institusi pelayanan kesehatan bagi masyarakat dengan karakteristik tersendiri yang dipengaruhi oleh perkembangan ekonomi masyarakat. Rumah Sakit harus tetap mampu meningkatkan pelayanan kesehatan yang lebih bermutu dan terjangkau bagi masyarakat agar terwujud derajat kesehatan masyarakat yang setinggi-tingginya dengan menyelenggarakan pelayanan kesehatan perorangan secara paripurna menyediakan pelayanan rawat inap, rawat jalan, dan gawat darurat, melakukan upaya kesehatan yang dilaksanakan secara serasi, terpadu, menyeluruh dan berkesinambungan dengan tujuan untuk mewujudkan derajat kesehatan yang optimal bagi masyarakat (Depkes, 2009).

Instalasi Farmasi Rumah Sakit (IFRS) merupakan suatu departemen/unit/bagian di suatu rumah sakit di bawah pimpinan seorang Apoteker dan dibantu oleh beberapa orang Apoteker yang memenuhi persyaratan perundang-undangan yang berlaku dan kompeten secara profesional, tempat atau fasilitas penyelenggaraan yang bertanggung jawab atau seluruh pekerjaan serta pelayanan kesehatan kefarmasian, yang terdiri atas pelayanan paripurna, mencakup perencanaan, pengadaan, produksi, penyimpanan perbekalan kesehatan/sediaan farmasi, dispensing obat, pengendalian mutu dan pengendalian distribusi (Siregar, 2003).

Pelayanan farmasi adalah bagian yang tidak terpisahkan dari sistem kesehatan rumah sakit yang berorientasi kepada pelayanan pasien dengan menyediakan obat bermutu termasuk pelayanan klinis yang terjangkau bagi semua lapisan masyarakat. Pengelolaan perbekalan farmasi sangat penting karena ketidakefisienan akan memberikan dampak negatif terhadap rumah sakit, pengelolaan obat meliputi tahap seleksi, pengadaan, distribusi dan penggunaan, yang didukung oleh manajemen, keuangan, informasi manajemen dan SDM. Hal yang menimbulkan permasalahan dalam pengendalian obat erat hubungannya dengan perencanaan dan pengadaan obat.

Penelitian ini dilakukan untuk memberikan usulan cara manajemen pengendalian yang optimal agar tidak terjadi *Stockout* pada sediaan obat kategori AV di Instalasi Farmasi RSUD Ajibarang dan untuk mengetahui waktu pembelian sediaan obat serta berapa jumlah yang dipesan agar persediaan optimal. Penelitian ini dilaksanakan dengan menggunakan unit analisis individu yaitu masalah pengaturan persediaan obat instalasi farmasi mengambil data primer dengan wawancara langsung dengan pihak-pihak yang terkait dengan proses perencanaan obat, sedang data sekunder yang diambil berasal dari dokumen rumah sakit dalam sistem informasi instalasi farmasi rumah sakit.

Tahap analisis data dilakukan perencanaan pengadaan sediaan obat dengan metode konsumsi didasarkan pada penggunaan obat tahun sebelumnya, dalam daftar item obat sampai akhir tahun 2019 sebanyak 1033 item obat. Penggunaan metode konsumsi dalam perencanaan kebutuhan obat dapat mengurangi kejadian kekosongan barang dan penumpukan barang, sehingga pada tahun berikutnya tidak perlu terjadi lagi.

Mengklasifikasikan persediaan yang efektif dengan analisis ABC yaitu mengkategorikan obat berdasar nilainya, tetapi juga harus melihat kekritisan berdasar kepentingan klinisnya tiap obat. Maka analisis ABC dikombinasikan dengan klasifikasi VEN. Hasil analisis ABC kelompok A ada 81 item obat, kelompok B sebanyak 103 item obat dan kelompok C ada 849 item obat. Kelompok ABC diklasifikasikan dengan VEN untuk memperoleh kategori AV 35 item obat, AE 39 item obat, AN 7 item obat, BV 12 item obat, BE 87 item obat,

BN 4 item obat, CV 6 item obat, CE 810 item obat, CN 33 item obat dari jumlah total 1033 item obat.

Penghitungan ROP untuk mengetahui pada titik berapa sediaan obat atau persediaan harus diadakan kembali pada kelompok obat AV dalam periode tertentu untuk melakukan pembelian kembali atau pembelian obat yang direncanakan. Dalam melakukan penghitungan ROP dan menyimpan *safety stock* maka IFRS akan dapat meningkatkan mutu pelayanan dan juga menghindari *back order* yang dapat menyebabkan kerugian.

Penentuan jumlah optimum yang dipesan dengan menggunakan perhitungan EOQ, pembelian yang terlalu banyak dapat menyebabkan penumpukan barang dan tingginya biaya penyimpanan, sedangkan terlalu sedikit pembelian dapat menyebabkan kekosongan obat. Pembelian optimum kelompok AV dengan perhitungan ROP dan EOQ akan terlihat kapan melakukan pemesanan dan berapa jumlah optimum yang dipesan dapat dihitung.

Efektifitas pengendalian persediaan dilakukan dengan simulasi perhitungan untuk jumlah pembelian yang disarankan berdasar metode *dynamic lot sizing* dengan pembelian obat yang riil telah dilakukan untuk kelompok obat kategori AV. Hasil perhitungan obat Depacote Er 500 mg total pembelian yang disarankan senilai Rp 764.243.688,00 yang mana total pembelian riil nya Rp. Rp 488.467.200,00 lebih kecil dari nilai yang disarankan, Sevoflurane Baxter 250ml total pembelian yang disarankan senilai Rp 343.200.000,00 total pembelian riil sebesar Rp 219.450.000,00, Irbesartan 300mg total pembelian yang disarankan Rp 320.572.564,00 total pembelian riil Rp 201.048.040,00, dan Abu Biosave 5ml total pembelian yang disarankan Rp 149.758.752,00 total pembelian riil Rp 100.799.160,00, Clopidogrel Bisulfate 75mg pembelian yang disarankan sebesar Rp 143.314.704,00 total pembelian riil sebesar Rp. Rp 92.383.200,00, Irbesartan 150mg dengan total pembelian yang disarankan senilai Rp 113.665.552,00 total pembelian riil sebesar Rp 71.128.860,00, Acarbose tab 50mg pembelian yang disarankan sebesar Rp 113.615.606,00 total pembelian riil sebesar Rp 71.093.000,00, Aquadest pro injeksi 25ml total pembelian yang disarankan senilai Rp 95.552.600,00 total pembelian riil sebesar Rp

79.113.320,00, Avodart 0,5mg @ 30 capsule total pembelian yang disarankan senilai Rp 56.334.200,00 total pembelian riil sebesar Rp 35.109.000,00, Fentanyl 0,05 /2ml injeksi total pembelian yang disarankan senilai Rp 50.782.732,00 total pembelian riil sebesar Rp 33.292.875,00, Tetagam 250 iu injeksi total pembelian yang disarankan senilai Rp 174.135.949,00 total pembelian riil sebesar Rp 108.481.225,00, Albuforce tablet@100's total pembelian yang disarankan senilai Rp 56.600.544,00 total pembelian riil sebesar Rp 68.418.240,00. Dengan demikian total selisih antara pembelian yang disarankan dengan pembelian riil sebesar Rp. Rp 836.628.163,00 semakin besar nilai ini menunjukkan efektifitas pengendalian persediaan.

Kesimpulan penelitian ini perencanaan kebutuhan dengan metode konsumsi yang dikontrol dengan analisis ABC kombinasi VEN dapat mengoptimalkan persediaan obat di RSUD Ajibarang, agar diperoleh persediaan yang optimal dilakukan pembelian obat dengan metode ROP (*Reorder point*) dan metode EOQ (*Economic Order Quantity*).
